Rice Seed Distribution

Date: June 8, 2019

Venue: Seminar Hall, SASE

Coordinator: Dr. Vinod Kumar Dhangra

Rice is a promising cereal crop among the farmers of western Uttar Pradesh. In order to improve the rice productivity an experiment was conducted for developing the new varieties of paddy through pure line selection by Prof. K.P. Singh at IFTM University. Dr. Singh got success to identify two new improved lines namely *Swad* (IMR-01) and *Navya* (IMR-02). Both lines were high yielding and short duration, which fits easily in intensive cultivation. Keeping in view the high potentiality of these lines, University administration has decided to distribute seeds of these lines to the farmers of adopted villages under Unnat

Bharat Abhiyaan namely Gindora, Dhanupura, Etala Mafi, Pallupura Ghoshi and Nagla Banbir. The event was graced by the presence of Registrar, IFTM University Mr. Sanjeev Agrawal who addressed the farmers and told them to improve the quality of production by using improved lines and by value addition in their products. He also added that it is our social responsibility to work for the upliftment of farming community. Dr. Virendra Singh, Assistant Professor discussed about package of practices for scientific cultivation of paddy crop and he assured the farmers that scientific methods of raising a crop will result in better returns. In this event more than 1000 kg paddy seed was distributed among 50 progressive farmers of adopted villages. The leaflet describing agronomic practices of paddy cultivation in Hindi language was also distributed. The dais was operated by Dr. Himanshu Trivedi and programme was coordinated by Dr. Vinod Kumar Dhangra.

Outcome:

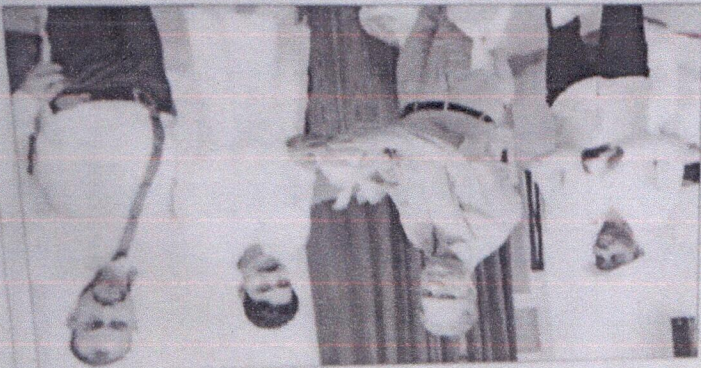

The farmers gained knowledge about scientific method of paddy cultivation as well as they got seeds of promising lines for further sowing in their fields.
